PFC Paper #7:
More on Artificial Intelligence, Increased
Longevity, and Nano-Tech—the Path of
the Gods

by Wes Penre, Thursday, July 7, 2011 @ 5:50 AM

"The journey here is about *self-discovery* in relationship to others"
- Barbara Marciniak, "*Bringers of the Dawn*", p.218

1. Abstract: The Fine Balance Between Science and Metaphysics

It is easy to get affected by other's viewpoints (in this case often off-worldly) on *how* we should evolve and behave here on Earth--especially if there is a group which we feel is challenging us and put our feet to the fire. And how about if these off-worldly beings do this from a surprisingly emotionless state of mind? This will induce fear; even a certain sting of hopelessness and these emotions may color our choices as a human race.

I hear from both LPG-C, writer and researcher George LoBuono, Alex Collier and the Andromedans, and others, that the aliens more than once have threatened to interfere with our evolution if we don't shape up as a species and stop destroying our planet, ourselves and other planets and galaxies in the vicinity due to our misuse of negative energy. They have even thought of terminating us as a species.

Author and researcher, George LoBuono, explains in his "*Alien Mind*" how civilizations go through different stages, and we are like adolescents now. It's a critical time in the history of mankind, because we are wobbling at the edge of the cliff and everybody out there is holding their breath if we're going to fall down or not.

I can see how aliens are concerned over how we're going to handle to stage of our development, because our misuse of negative energy is alarming and our arrogance level high. Not only are we about to destroy our own species and our planet, but it will also affect other parts of the universe, as we, simplistically speaking, are borrowing energy from other parts of space in a "balloon-effect" and thus deplete that space of energy without "paying back". This will decrease the longevity of star systems and galaxies close to us, and in larger terms, when this is done by other civilizations as well (which it is), the longevity of the whole Universe. So it's no wonder aliens are concerned and monitor us closely. If worse comes to worse, they *may* actually terminate us as a species if we don't learn our lessons, but save the Living Library otherwise and just start over, seeding a new species, perhaps. It would not be the first time.

So it's all up to us. We can't blame everything on a Global Elite or even malevolent aliens behind the scenes; we "ordinary humans" are the majority and the responsibility is ours. I doubt we will be granted sovereignty of this planet if we can't even stand up for ourselves, and instead of coming together and stop being lazy, prefer to watch football games on TV.

1.1. Waking up the Sleeping Giant

It's time to wake up to reality, which here is defined as our joint current moment and what is happening around us at this present time, and how the choices we make now will directly affect our future. The reason we have been taken so much advantage of is solely because of our ignorance; sometimes self inflicted (we don't want to hear no evil, nor see no evil), and it always kicks back on us. We can almost look at it as demon- or entity possession on a grand, planetary scale. Where there is ignorance, fear and low vibrations, entities come in and take advantage of the sleeping population. In this case we have different alien species fighting over dominion of Earth, the real estate and its inhabitants, even being able to do so without the knowledge of billions of people. This in itself can look like a discouraging situation, but it may only take a big shake-up to wake the sleeping giant (we humans). I am trying to wake the giant up *before* the shake-up will be too traumatic. Metaphorically speaking; if we think we can avoid a car accident to happen, why would we look the other way? Our impulse would be to help, wouldn't it?

An "accident" is about to happen very soon, but we still can avoid it from happening. Albeit, what is planned for our future by forces whom might seem to have our best interest in mind, but don't, in my opinion, is no accident. There are those among us with a talent to convince the masses, who are wittingly, or unwittingly, attempting to steer us in a very dangerous direction.

We are now talking about Alien Technology and Artificial Intelligence (**AI**).

I don't mean that all alien technology is bad or dangerous. Some of it can be very helpful and something we may want to look into, but the danger lies in how it is used! We are already using lots of alien technology, mostly within the military industrial complex (no surprise). Other is used by all of us on a daily basis; I am using it now, when I am writing this--I am using a computer and a word processor.

Technology is neutral; it's not good nor evil, it's neutral. It won't do much unless there is a higher consciousness which programs it. So it depends on how it's programmed and what it's used for. But even that is stone age today; our future, if certain factions of ETs and humans will have their way, is Artificial Intelligence and enhanced longevity, created with technology. These two goals are what we are mainly going to discuss in this paper. If we let certain scientists and their followers do as they please, where will it take us?

I have mentioned elsewhere that science and religion (and metaphysics) need to merge for humanity to be whole and be able to move on, but that doesn't mean we need to adapt to any specific scientific idea out there; especially not the ones introduced, overtly or covertly, by the Global Elite and their alien masters. Science is

the knowledge of the Universe--who we are, our place in it, the goal of a universe, how universes are born and how they die, the fact that we are both physical and spiritual as One, what stars, planets, nebulae, and galaxies really are, and combine that knowledge with who we are on a subquantum, metaphysical level, and what the purpose is if we combine all this and realize that we are all ONE. When this is understood by mankind, we will be able to raise our vibrations above the current low and break the prison walls. Only those who can match our vibration will stay with us in our incrementally achieved new reality.

The questions are: if the above are the goals, where does AI, nano technology, and other advanced physics and mechanics come into the picture? Do these technologies enhance our consciousness, or do they do the opposite? Will we use technology wisely? These are very important questions that we need to discuss on a serious level.

2. The Codes of Consciousness

Things are going to be tough in the next few years for all of us--some of it are staged events by ETs and their human cohorts, while other events are natural cycles of the cosmos. People will be highly effected in many different ways, and it's up to us how we are going to react. Those, who have been prepared by doing their homework will have an easier time, while those who chose to remain ignorant are in for a big shock.

This is a great opportunity for certain forces in the ET science community to come forward and offer solutions. The most amazing scientific "new" discoveries will be presented to humanity in an apparent effort to assist the situation. But of course it comes with a price; and I'm not only talking about money. There are these ET factions who want us to be dependent on technology, and many of our brightest minds here on Earth are supporting and working furiously on it. I can't help but stress enough what I personally don't believe in, and that is to be part of any future super-technological society. It's a trap.

Instead, go inside yourself. Other programs will open up, which are currently sealed away. They are codes of consciousness, and there are things firing off these codes. From hereon, things are going to happen rapidly, and catalysts in the environment, whether its planetary events, or off-worldly by friendly ETs, will take consciousness on this planet to a totally new level. Those who go with the flow will find themselves on an island where the storm doesn't hit, no earthquakes reach and no hurricanes blow. Who will do this for us? No one but ourselves. We have this encoded inside of us, we are just waiting for these codes to activate and to be fired off, one by one, like a series of firework.^[1]

But will everybody be ignited? Yes, everybody to a different degree. However, those who receive the changes with fear and anxiety will misinterpret what is happening and the codes may misfire and back flash. It's imperative, whether you agree with this or not, to set your goals to reach higher consciousness. I am painfully aware of that it's still not for everybody, and that is okay--some humans want to continue experiencing the 3rd density/dimension reality and go through all the hardship and

continue into the Machine World on the other end, and that is their choice. I know I wouldn't like it one bit, and my *Solutions Papers* will reflect this and tell you why.

This time is about connecting with the cosmos and become Multi-dimensional again. Most of those who have worked towards this goal have a subtle feeling that we have experienced this high in consciousness before, but we can't put our fingers on it. It's flashing up like a buried cell memory and then goes away. If you have had this flashback, it's one of many signs that you are starting to connect, because we certainly have been multi-dimensional before here on Earth, but we were tampered with by more than one species; by those who either wanted to create a slave race out of us, or by those who saw our potentials and wanted to take advantage of it and use it for their own survival.

There are about 7 billion people on the planet right now, and that is just the right amount. We will not see an increase of people to 8-9 billions and beyond. We have more or less reached the maximum amount a people this planet will probably ever see. This is not an accident but per design. Everybody alive right now chose to be born into these times because of a tremendous group agreement that we made before we incarnated here in the so-called "end times". All of us, no matter what we think, are either here to help raising the consciousness of the species and of the planet, or to just be here to feel it out, out of curiosity. Not everybody will make it through 2012, and you will see many people exit before then; often unexpectedly. This, too, is no accident. There are those who wanted to participate in this mass event, but not be part of the 2012 wave we will talk about later. Still, we are all here to help out one way or the other. We need this amount of people--7 billion--to pull it off. It's the numbers that count for us to be able to create a New Earth; it's all about connecting energy! Be happy you have a body right now and take good care of it, because you are lucky to be here. There are lots of discarnate beings who wanted to be part of this as well, but not everybody gets a chance to have a body during the nano-second. If you have one, feel fortunately--you can't evolve without it!

3. How "New" Alien Technology Will Be Introduced, Creating Split of the Human Race

We will see much more "new" alien technologies being released. Not all of them at once, but it will be done, step by step.

Before we go on, we need to understand that when we're talking about science, there are different kinds. We have a) *mainstream science*; b) *secret (or occult) science*; c) *alien science, which includes Nikola Tesla science, that may be thousands of years ahead of mainstream science* d) *rouge science*.

Science is based on theory. Then it's up to the scientists to prove these theories. If it can be proven and replicated over and over, we have proven fact. This is how science has been working for hundreds of years, but now, when they are starting to look into smaller and smaller particles and enter the realm of quantum physics and mechanics, nothing is consistent anymore. You can't use the same formula to prove or disprove a theory, because everything is fluid, moving, and changing attributes

and behavior. Moreover, quantum physics often has a tendency to prove old, solid science wrong! Nothing is black or white, and this is a huge problem for scientists. How can *anything* be proven anymore? What was true yesterday is not true today. Everything changes so rapidly, and if we are stuck in old, outdated thinking and behavior, our lives are going to be very dysfunctional, even if it worked okay not so long ago.

However, in all this chaos, there will be "fixes". High-tech Enterprises will come out with technologies that can put some stability to the chaos. But these fixes have everything to do with the Machine Kingdom, which is planned to be introduced incrementally here on Earth until people get used to it and incorporate it into their lives step by step. We will see PhDs or authoritarian researchers/writers who promote this new Kingdom as a solution for mankind, and many, many people will agree and follow.

I will say there will soon be a split in mankind, and this has to do with the new technology. There will be those who go for it, and those who choose not to be part of it. Machines will blend with humans so that they will become part machine and part human. This is of course not real to many people today, but is nevertheless what is planned, which I will show. This is nothing new; there are ETs out there who have already fallen into this kind of reality by their own doing or had others do it to them. Now they are trying to implement this on humanity as well. Later on we will discuss *why* this is introduced. For now, control over consciousness may be a clue.

Figure 1: Machine Technology

The impostors, who want to introduce what we call Artificial Intelligence (**AI**) into society know how to do it. Just like with everything else they have introduced, which is for their gain and our loss, it follows a certain formula that seems to work on us humans most of the time. And with the risk of repeating myself here, this formula is based on fear. The formula itself is quite known to people who have looked into how

the Global Elite work. It goes: **problem-reaction-solution**. In other words, to be able to end up with a solution which benefits you when you know that people in general would object to your proposal is to instigate a problem big enough to create a reaction among the general population and a demand to do something about it. Then you can introduce the solution to the problem you created in the first place, and the population will, due to fear of loss and perhaps reluctantly at first, adjust accordingly and accept your solution, and you get what you want. This formula, however, needs to be calculated precisely, because the problem created has to be in proportion to the solution you want to achieve. For instance, if the problem is too small, people may not think that the solution is worth it. A perfect example of this calculated, well balanced formula, for those who haven't seen through this yet, is the 9/11 attack on the Twin Towers. The Global Elite commits a mass murder which traumatizes the whole nation. The Media do their part and start feeding off the fear, saying that this can happen again, anywhere, anyplace and anywhen; "no one knows where the terrorists will hit next!!!" So, here we have a problem, which was created, and we have the reaction, and now we can introduce the solution, which is a much tighter security and surveillance system. We live in an Orwellian 1984, Big Brother society, and many people welcome it out of fear from what would happen if they wouldn't. It works like a clock.

So, if someone wants to steer us into a new direction, going towards a machine society and an acceptance of AI, it has to be done in increments. Hence, the impostors use what they have, and again feed off human emotions.

Problem: Young men and women go to war to fight for their country (which is another lie) and get their arms and legs shot off in the process. The Media bring up the problem and run random stories of soldiers being severely wounded at war and how it affects them and their families.

Reaction: People feel for the soldiers and their families and wish everything could be alright.

Solution: The soldier gets a new prosthetic and joins up again. Of course, he has to pass the test, running so many miles with a heavy backpack etc., and he does it! This "brave soldier", who doesn't give up fighting for what he/she thinks is right, can do so with this fantastic new technology.

This is a story from real life, and it was brought up in the Media last Fall. So this is what technology has come to; and of course it's just the technology that has been released. There is so much more they haven't showed us yet. The moral of this story, though, has not so much to do with the soldier as how it affects our subconscious mind. We think that if they can fix up a soldier like that and he'll be as good as new, it's comforting in case we need prosthetics and artificial body parts ourselves in the future in order to survive.

This is how they seduce us. It's like saying implants are good on babies, because they can't be stolen at the hospitals. And who is stealing the babies? Many of them are stolen by secret organizations to be used, either as sex slaves, breeders, mind controlled assassins and more. So again, the solution is presented after first have created a problem. Many people chip their pets so they can be easily found, and it is

a good thing in this particular sense, but when used on humans, there are darker agendas behind it, such as lowering peoples vibrations, controlling your thoughts and behavior and much more...

"The Machines can't come in without you, but after a while they don't need you."
- *The Pleiadians*^[2]

What we're going to end up with if we don't face the agenda behind this is that we will have machines that are many, many times smarter than we are. Isaac Asimov's old novel, "*I, Robot*" is not so farfetched after all. Of course, being a world famous sci fi writer, he knew what he was writing about.

Speaking of robots; what could be better, if you want to create a certain future, than to influence our kids and program them from early age? Brilliant! And that's of course exactly what is being done. How about robots as problem solvers? Cool, huh, children? Here is merely one example out of many how our young kids are being manipulated via cartoons, video games, and TV. How about a life inside a video game?:

(A video was supposed to go here, but after I posted it, the video was taken off YouTube due to copyright issues)

This is where parents' responsibility is so important. By choosing to stay ignorant, parents must be held accountable for the programming of our children. Those who don't educate themselves and their children are just as responsible as the Powers That Be, who program them. Especially today, when there is so much information available, parents should know better. Instead, many parents turn a blind eye because it's convenient to let the kids play with electronics and watch movies which control their minds.

Due to the lack of responsibility and interest in educating their kids, people, especially of the next generation, will be very excited and thrilled over all the new technology that is introduced, while others don't want to have anything to do with it. That's where the major split is going to happen. For those who choose the latter, what is happening in the Machine World will be a perfect catalyst for them to really take the step, leave the functional insanity behind, and go back to nature and build new, small communities at first, which will grow in size, and join together as this develops. The fans of the machine technology will move into bigger cities where they can enjoy the new technology. It may feel fantastic at first when your needs are taken care of and you get the medical attention necessary, but you have to be chipped and you will soon become part machine. Eventually you need to "plug yourself in" to even start functioning, and you will connect to a virtual reality that is built on machine technology--a Matrix within the Matrix within the Matrix...How far down the rabbit hole do we want to sink?

Some may argue and say that the Global Elite and those behind them will not allow the rest to reject their machine society, but they will have no choice. It's all about vibration. Those choosing the Machine World will do so because of underlying fear. They believe, whether they are aware of it or not, that by introducing higher developed technology into their lives, they have better chances of survival. However,

it's only superficial and this whole agenda fills a much bigger purpose. If the machine followers knew, and were willing to face their hidden fears, and clearly see what is really behind it and what the end goal is, they wouldn't be so thrilled. Those who choose not to participate will create their own, much less technologically based societies in their local universes and build their multi-dimensionality where it should be built; in biological bodies close to nature.

The forces whose imperatives are to take over always feed off fear, and when I say "feed" I mean it in all its definitions. Beings of lower vibrations, whether they are human or not, are psychic vampires, and they get stronger by using the busy fear energy and enhance their own, in a large degree negatively oriented, energy field. It's food, and their survival depends on it!^[3]

But what about space travel? Don't we want to be part of the galactic community and travel between the stars?

Yes, we do, and we will. There are many ways to travel between the stars. It can be done with or without technology, or with minimal technology. Some aliens travel in 3D spaceships, using Einstein-Rosen Bridges to go from one place to another, perhaps million light-years away. Others use their "avatars", or light-bodies, while their 3D bodies are still left on the original planet. Others have the power to bring their original bodies with them. There are multiple ways to travel inter-galactically. Also, I am not saying we are not going to use technology to travel; technology in itself is not bad, it's only if it's used to manipulate and control that it is bad. However, before we even go there, we need to create a new world, a totally new society built on a higher frequency and level of understanding life and the universe. When we can do that, we can start thinking about space travel, and perhaps even time-travel. Our environment, and how we use the technology we feel we need is in direct ratio to our level of consciousness. Which level of consciousness is TV, twitter, text messaging, video games, FaceBook addiction? Think about it.

Some say we should be looking at a middle-way, which would be the way to go, by using technology wisely, and that would all be fine and dandy, if we as a humanity were high enough in frequency to break out of the frequency fence we're currently stuck in and are all able to see what is done to us, presently. If we can't do that, we are going to see a split of humanity to begin with; there is no third way.

4. Protecting Our Biology

250,000-300,000 years ago, our biology was hijacked. We were successfully cut off from the higher dimensions and densities and put in a frequency band which glued us, more or less, to the 3rd Density. Our DNA was tampered with in such a way that the whole Living Library Project came to a definite halt and has been on hold ever since as the new owners of this planet changed the policies. They were only interested in a slave race who could do the dirty work for them. We have been their slaves in one way or the other ever since. To call it something else would be false and the arrogance with which they were (and still are) treating us is overpowering at best.

Our responsibility now is to get back on track and not let anybody else own our biology to further develop a machine race or by genetically tamper with us again behind our backs to create new hybrids for new, updated purposes. And don't believe for a second that this is not already happening! The Grays are a perfect example of this, and human traitors are working in secret bases such as Area 51 and others to create a new hybrid specie. Our own human Global Elite and those who support them on lower levels have been working very hard the last decades or more to create this in conjunction with bands of different ETs. Many of us have listened to the whistle-blowers and perhaps even seen some pictures of scary looking hybrids in test tubes, being developed deep down in underground facilities, far from scrutiny, if it wasn't for the whistle-blowers. This is not science fiction, it is happening on a grand scale as we speak.

The good news is that we are supported on our quest to free ourselves from hundreds of thousands of years of slavery. Not all aliens have imperatives that clash with ours. In fact, most aliens, in terms of species agreements (imperatives) are here to help and assist in one way or the other. Like the Pleiadians say; *cosmos is not malevolent; it's benign. The Multiverse is there to guide you live in a friendly and supportive universe.* They go on saying that there is of course those who want to manipulate us and work against our development as a species, and control us, but they are way fewer in numbers than those who would accept us with open arms. The Pleiadians are one of the latter, the Guardian Alliance^[4] another.

Still, none of them are here to do the work for us while we're sitting on our behinds. It's up to us to do the work. I am going to discuss in details what this work includes later on, and the reason why I want to wait is because there are others, who want to push another solution on mankind, which I don't agree with. I want to present them "side by side" so to speak, so the reader can distinguish and make a conscious decision in what direction you want to go.

In this space and time there are many forces from the cosmos; dimensionally, inter-dimensionally, from Inner Earth, from the surface, other galaxies, and even other universes, who pay interest in our development, because the Living Library is unique; the idea is unique! This can seem very overwhelming and overpowering for our limited ways of thinking to comprehend and meet without fear, but that's exactly what we need to do. To many, it will seem like a hopeless situation, because this group has this agenda, and that group has that agenda, while a third group...it seems like there's no end. However, when it really comes down to it, it really doesn't matter. We need to evolve in spite of these forces, learn who we are and how to raise our vibration and recognize the fear and anxiety within us, and learn to master these emotions and not tune into the vibrations that go along with these lower vibrations. Not until then can we break out from the frequency fence we're stuck inside.

Even if it's not pleasant, we need to know what's out there, what the imperatives of certain ET groups are to be able to understand who we really are in this organized chaos, and then take appropriate, peaceful steps away from the battle ground. Instead of taking sides in any given battle, we simply walk away and do our own thing, knowing the battle rages somewhere, but it's no longer part of our own local universe. That's our first step.

5. The Internet vs. the Innernet

Marciniak's Pleadians are very clear. Over and over again, they emphasize how dangerous our electronic devices are; everything from cell phones and TVs to the Internet. They encourage us not to waste our time, and stop letting our lives depend of electronics. They would like to see us throw our cell phones away, only using computers minimally (if at all) and instead of letting Google be our "All-Knowing God", we need to go to our "*Innernet*" instead of the Internet for answers; the Innernet being our inner knowledge, our "*Inner Google*". We have all the answers inside, because we are part of All That Is; of God Source, if you will. We need to start believing in ourselves and listen to our "inner voice" or intuition for answers. However, as long as we are addicted to electronics (yes, it is an addiction worse than heroin), we will not be able to reconnect with our Innernet. This can only be successfully done in full when being in nature. We need to stay grounded in our bodies to become multi-dimensional. It's not a matter of leaving our bodies to seek enlightenment; the bodies are our guides and helpers. When we're talking about multidimensionality we don't mean that we should *become* multi-d; we *are* multi-d. Not only our souls, but our bodies are multi-dimensional bodies. We use our bodies as extended "nerve endings", and the 12 strand of DNA, representing each of the 12 chakras, is our ticket into the Multiverse.

Very few people on this planet know what their bodies can do. Here on Earth, at worst, we think that our bodies are us, and when our bodies die, we die; or at best, our bodies are our vessels, so that personality (mind) and spirit (us) can experience things in the 3rd dimensional physical reality. Still, the body is so much more than that. It has a wonderful cellular memory, it has soul memory and can be used for time- and space travel in ways totally unheard of by most humans.

Life is all about experiencing and learning in the reality where we incarnate. Although we were tampered with in a not so constructive way, our goal is to enhance the power in our bodies by reconnecting our dormant DNA, from 2 strands to 12 strands, which is what is currently occurring.

On the other hand, the Pleadians say that electronics *could* be used in a way that's not harmful, but the way we're using it now, in the hands of the wrong people, it is very destructive, all the way down to a cellular level. By introducing these technologies to our kids at an early age, we help setting the stage for them to meet their own demise in a not too far away future. Again, welcome to the Machine Kingdom, where illusion and deception are the names of the game, and the consequences are devastating.

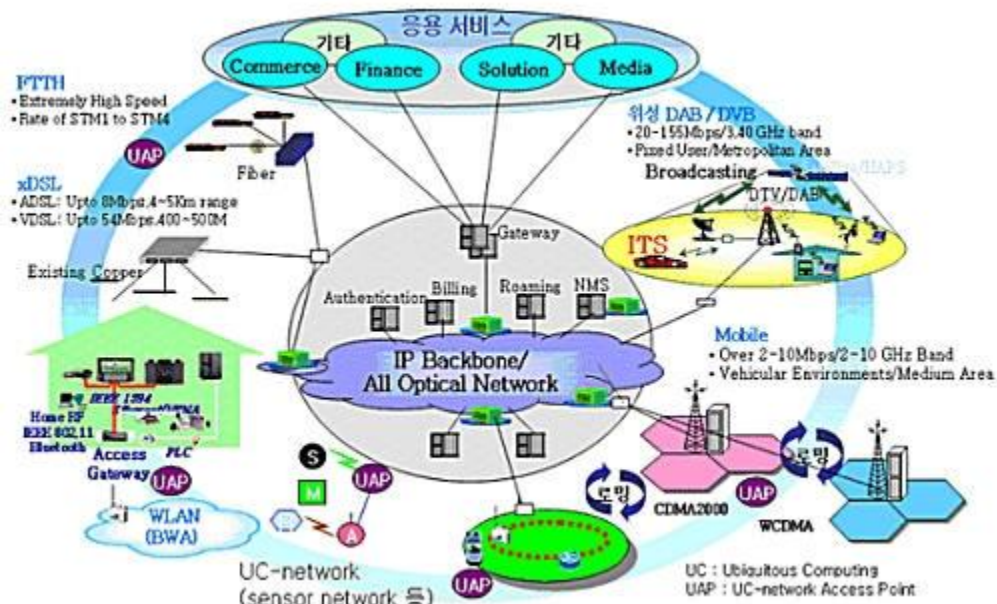

Figure 2: The Internet; a dangerous route to go

Our task is not to turn this around and start using electronics more responsibly, but again to step out of it all together and develop our Innet. It's like when you leave a lit up house in the middle of the night and go outside, it takes a while before your eyes get used to the dark and you can see the stars. Still, the more time you spend away from any artificial light, the more stars, nebulae and galaxies you can distinguish. Not until we have totally withdrawn from electronics can we appreciate Nature and the elements again, and it takes some adjustment. At this juncture we have no other choice, and I don't say that in the sense that it would mean something "necessary evil", but as part of a new, exciting journey. I used to live with nature all the time when I was younger, so I developed a very close relationship with it. I talked to the birds, the squirrels, the butterflies, the trees, and expected them to return my communication. And they did. I thanked Mother Earth for letting me take part of all her beauty and magic. When you are able to connect with your environment, realizing that it is all a part of you, and everything is unconditional love on a higher level of existence, life becomes very rich and fulfilling, and that to me is true happiness. I am still doing this on a smaller scale, hindered by work, research and writing, currently, but that will hopefully change soon. In all honesty, I have never been happier than when I was living with nature.

With that said, let's explore further the other side of the coin, the upcoming machine technology--our possible parallel future.

6. Welcome to the Machine Kingdom--Man and Machine Becoming One!

There are geniuses in all areas of life. Raymond Kurzweil was a prodigy in machine technology and became a well respected man in his field.

In 1965, as a high school student, he was on Steve Allen's Show, *I've got a Secret*, and played a fascinating piece on the piano. Afterwards, the young boy was grilled on how that piece came together, and Kurzweil said it was done on a computer^[5]. This was unheard of at the time, when music was still made by people on real instruments.

Furthermore, the young boy told the audience that he had built the computer himself. It was quite an impressive piece of work for its time, but the show panel, as usual, did not connect the dots, but instead of being fascinated by what Kurzweil had actually built, they focused on his young age.

Time Magazine wrote in February 2011:

...Kurzweil would spend much of the rest of his career working out what his demonstration meant. Creating a work of art is one of those activities we reserve for humans and humans only. It's an act of self-expression; you're not supposed to be able to do it if you don't have a self. To see creativity, the exclusive domain of humans, usurped by a computer built by a 17-year-old is to watch a line blur that cannot be unblurred, the line between organic intelligence and artificial intelligence.^[6]

There we go. If I didn't know better, I would be in awe that such a genius is born and manage to become a front-figure for the machine world technology. However, I know (and the reader who has followed my series of papers knows as well) that we all are born into this world by first setting goals for ourselves to accomplish in a certain incarnation. Of course, this is the case here as well.

Figure 3: Raymond Kurzweil

Today, Kurzweil believes we are getting close to the time when computers will become intelligent, but not just intelligent, but *more* intelligent than humans

(compare the Pleiadian prediction above). And this is not something we says with regret; he looks forward to it, because this is what he, and many others working with him want. And not only that; they are working towards *Singularity*, which means that man and machine become one. I would suggest you put the word "singularity" in memory, because not only will we discuss it here; you may have, or you will be hearing that word a lot.

Kurzweil goes on saying that when the time comes when the machines exceed our own intelligence, our bodies, our minds, and our civilizations *will be completely and irreversibly transformed*. According to his own calculations, the civilization as we know it will end in 2045; that's when the machines will take over.

This is no longer science fiction. It's not only Kurzweil setting up some delusive target of something that has nothing to do with reality; this is really something scientists are working on, and it's now getting all over the news, and we will be introduced to this by the media in a manner that we eventually will welcome it and look forward to it--too many already do. The Global Elite know how to manipulate the masses. Some people (like myself and others) will fall between the crack and "get away" from it, so to speak, but they won't care. They will get what they want and if a few refuse, so be it. You see, this has been planned for hundreds of years, and people can't see the cleverness of it all. The problem is that people can't think in terms that someone may set goals that span over several lifetimes; hundreds, sometimes thousands of years. It's not real to them, and those who are behind it know this. What is so hard to believe is that time is not the issue; those who want to manifest this are next to immortal and not from this world. Furthermore, they don't live by our local time system; it's unique for Earth. If the mass population started to understand this concept, it would be easier to see through the agendas played out.

Time Magazine again, same article:

So if computers are getting so much faster, so incredibly fast, there might conceivably come a moment when they are capable of something comparable to human intelligence. Artificial intelligence. All that horsepower could be put in the service of emulating whatever it is our brains are doing when they create consciousness — not just doing arithmetic very quickly or composing piano music but also driving cars, writing books, making ethical decisions, appreciating fancy paintings, making witty observations at cocktail parties.^[7]

And here are the punch lines (my emphases):

If you can swallow that idea, and Kurzweil and a lot of other very smart people can, then all bets are off. From that point on, there's no reason to think computers would stop getting more powerful. They would keep on developing until they were far more intelligent than we are. Their rate of development would also continue to increase, because **they would take over their own development from their slower-thinking human creators. Imagine a computer scientist that was itself a super-intelligent computer.** It would work incredibly quickly.

[...]

Maybe we'll scan our consciousnesses into computers and live inside them as software, forever, virtually. Maybe the computers will turn on humanity and annihilate us. The one thing all these theories have in common is the transformation of our species into something that is no longer recognizable as such to humanity circa 2011. **This transformation has a name: the Singularity.**

The difficult thing to keep sight of when you're talking about the Singularity is that **even though it sounds like science fiction, it isn't, no more than a weather forecast is science fiction. It's not a fringe idea; it's a serious hypothesis about the future of life on Earth.** There's an intellectual gag reflex that kicks in anytime you try to swallow an idea that involves super-intelligent immortal cyborgs, but suppress it if you can, because while the Singularity appears to be, on the face of it, preposterous, it's an idea that rewards sober, careful evaluation.^[8]

Here they are introducing the idea of Singularity; first as something fantastic and amazing, but the more it will be discussed in the near future, the more incorporated these ideas will be with the common population. It is already happening, in fact. People are reading about it in magazines and newspapers and watch interviews on TV with brilliant inventors and scientists, but no one can wrap their heads around this concept. Yet, the concept is easy once the mind accepts to think in these terms: **our biological bodies as we know them will be obsolete! In the future, a body will be both biological and machine, and what happens then? The bodies are not sufficient enough to carry a soul fragment (human mind, personality, thinking unit)!**

Like the same article above says; there are many theories about it and one is that we humans will merge with the computers and become super-intelligent cyborgs. This is the goal. Of course, no one is telling you that the more machine-like a biomind becomes, the less chance someone can incarnate into it, which means there is no soul consciousness there; the consciousness which carries the intelligence will be artificial; thus, Artificial Intelligence (AI). The consequences should be obvious to the reader by now, but if not, and if you haven't already, read my "[*PFC Paper #4: The Animus, Artificial Intelligence, and Blank Slate Technology*](#)" about the Animus race.

Figure 4: Arnold Schwarzenegger as the Terminator

The idea of a machine society has been introduced to us, as usual, by all open channels thinkable; Hollywood being the most effective media if you want to reach out to the masses. Robots appear in almost any sci fi movie worth its name since the 50s or so, but it has become more sophisticated over the last few years, where cyborgs often have taken the front seat in the plot. It started for real back in the 1980s, with Arnold Schwarzenegger's "Terminator" movies. Oh yes, this man, who later became the Mayor of California, knew more what was behind the plot of these movies than people think. His goal is with the Global Elite and he admires Hitler; he wants to be a dictator. He's admitted to this.

Since three years back, there is a Singularity University, which Kurzweil co-founded, hosted by NASA, with Google being a founding sponsor.^[9]

We are still staying with Time Magazine here for a while longer, just because it is an excellent article on an extremely important subject. I encourage the reader to read the whole article online at <http://battleofearth.wordpress.com/2011/03/06/2045-the-year-man-becomes-immortal/>, but I am selecting the highlights here to make my point for our further discussions. Here is a very interesting part:

The Singularity isn't a wholly new idea, just newish. In 1965 the British mathematician I.J. Good described something he called an "intelligence explosion":

Let an ultraintelligent machine be defined as a machine that can far surpass all the intellectual activities of any man however clever. Since the design of machines is one of these intellectual activities, an ultraintelligent machine could design even better machines; there would then unquestionably be an "intelligence explosion," and the intelligence of man would be left far behind. Thus the first ultraintelligent machine is the last invention that man need ever make.

The word singularity is borrowed from astrophysics: it refers to a point in space-time — for example, inside a black hole — at which the rules of ordinary physics do not apply. In the 1980s the science-fiction novelist Vernor Vinge attached it to Good's intelligence-explosion scenario. At a NASA symposium in 1993, Vinge announced that "within 30 years, we will have the technological means to create super-human intelligence. Shortly after, the human era will be ended."^[10]

We've discussed earlier that most science fiction writers don't make up their stories from nothing; they have inside knowledge gained from association with the Power Elite. You wouldn't be published by the big publishers if you didn't have a story which could further enhance an agenda set by those behind the scenes. Here again, we

have a science fiction writer speaking at a NASA symposium. The indoctrination and manipulation needs to have many outlets and the ideas introduced in increments to the masses from many different angles.

Kurzweil has not been lazy since he appeared on TV in 1965. He has worked intensively on developing machine technology and AI ever since and received lots of rewards, holds many patents, and of course made himself a fortune. President Bill Clinton gave him "The National Medal of Technology" in 1999, and Bill Gates called him *"the best person I know at predicting the future of artificial intelligence."*

Kurzweil says that Singularity is not just an idea; it attracts people, and those people feel a bond with each other. Kurzweil calls it a "Community". *"Once you decide to take the Singularity seriously, you will find that you have become part of a small but intense and globally distributed hive of like-minded thinkers known as Singularitytarians."*

Singularitytarians (who are increasing in numbers) believe in technology when to shape our future. And don't think twice about it; these people, who are almost obsessively pushing machine technology and Singularity in particular, did incarnate here with the purpose of steering us in this direction. We will see many, many more people promoting this future, and our children who are growing up now during the nano-second, if they are not educated as to what is happening, will fall into the trap. It's enough to go out for a walk or drive your car around; you will see teenagers everywhere texting and twitting at the same time as they are walking. Many of them are totally caught up in what they are doing and don't even notice what is happening around them. This world, which I am writing from, is beginning to cease to exist for the younger generation. I often see them in groups, where most of them are either on the cell phone or texting, not engaged in any conversation with their friends who are walking beside them. I have seen them many times crossing the street, forgetting to look for cars. It's come to a point where the drivers pay extra attention when they see teenagers coming, because they are aware of this problem.

Parents have an enormous responsibility right now to educate their children and don't let them get all these new toys for their amusement. We live busy lives in a busy society, and it's easy to take a shortcut and letting the kids play around with their electronic toys so we get off the hook and can concentrate on "important things that need to be done". We need to understand that this is all a giant setup where one thing is connected with another. We are kept busy so we don't get a chance to reflect, and if we're busy making a living in an incredibly fast pace, we don't have time for our children in the way we ought to.

When this happens, we need to step back and reflect; we have no choice. If we only slow down for a while, we'll see what we're caught up in and hopefully will understand the seriousness of it. When things around us speed up, it's our duty to slow down. The children are our future, and if we choose to look the other way and think that electronics is just the signs of our times and human progression, we are helping forces who have no empathy for us as a species, but only to implement their own imperatives on us; imperatives which eventually will cause our demise as biological entities. We have been asleep for millennia, but now we have no choice but to wake up.

This whole thing with machine technology and Singularity leads to another subject, which goes hand in hand with the former; it's about longevity and immortality.

The Singularity University holds annual summits, and the following was discussed during the 2010 summit:

After artificial intelligence, the most talked-about topic at the 2010 summit was life extension. Biological boundaries that most people think of as permanent and inevitable Singularitarians see as merely intractable but solvable problems. Death is one of them. Old age is an illness like any other, and what do you do with illnesses? You cure them. Like a lot of Singularitarian ideas, it sounds funny at first, but the closer you get to it, the less funny it seems. It's not just wishful thinking; there's actual science going on here.^[11]

This is what I mean when I say the world will split into two. The Machine World and the World of Natural Evolution. Death is something many people are afraid of, only because it's a mystery; they don't know what will happen. Still, with a little research, it's easy to find out that death is not something to fear; quite the opposite. I have written a lot about it in previous papers. However, the fear of not existing anymore and the loss of relatives and friends (another falsehood) make people attracted to ideas like Singularity, where their lifespan can be extended with many extra years, and perhaps by then, technology has come to a point where immortality is possible.

You can see where this is going. It's a trap, because what they are creating are an artificial, super-intelligent race, which can be programmed as a hive community, where All is One in an artificial way, and where everybody is becoming disconnected from Source Energy. Their intelligence is synthetic but intelligent, emotionless and soulless. Your spirit/information cloud can no longer manifest! Is this the future we want? If people really thought about it this way, who would want it? The problem is that those who fear death so much that they fall for this won't even read papers like this. Still, it's their choice. In a Free Will Universe, like our own, anything goes, but there are always consequences/karma in everything we're doing. There are no free rides.

The alternative, of course, is to evolve naturally, without machine technology at all. We have our biological body, our mind and our soul working together to find enlightenment and higher realms of existence through experiences and cognition. Our DNA is reactivating more and more as we learn and we will learn to become multi-dimensional again, *with and due to* our thoughts and emotions, not *without* them.

The choice for me is easy.

7. Artificial Life Created, Called "Cynthia"

An article was published, originally in "Science", that "researchers have constructed a bacterium's "genetic software" called "Cynthia", and transplanted it into a host cell.

The resulting microbe then looked and behaved like the species "dictated" by the synthetic DNA." This team of scientists was led by Dr. Craig Venter of the J Craig Venter Institute (JCVI) in Maryland and California. The scientists have put two methods together to create a "synthetic cell".

"As soon as this new software goes into the cell, the cell reads [it] and converts into the species specified in that genetic code."

[...]

"This is the first time any synthetic DNA has been in complete control of a cell," said Dr Venter.

'New industrial revolution'^[12]

What this means is that science has revealed they are now able to create synthetic life forms which paves the way for designer organisms that are built rather than evolved. They are now about to be able to build life from scratch; the New Human!

Michio Kaku, professor of Physics, and well known by many for his best seller, *"Parallel Worlds"*, went live on Fox News, comparing this new revelation like the biggest discovery since the splitting of the atom.^[13] He compares it with downloading apps to a cell phone, and in this case they took a cell from a goat and "downloaded" new DNA which they then programmed, but yes, they used human DNA as well. The point is, says Professor Kaku, that it is artificial. Both him, Dr. Craig and others are promoting this as a potential solution (or partial solution) to global warming. Even the oil industry is interested. But none of these scientists are really discussing the ethical and moral parts of this in any great details. What else can it be used for? When asked about the ethical issues, they say these have been discussed in details among the scientists. Where? Behind locked doors? The details of these discussions have not, as far as I can tell, been made official. But just the mentioning of having discussed them calms most of the population down, they believe. And they are correct in that. People can go back to sleep.

When asked by the Fox News reporter if this is not some kind of "Jurassic Park experiment", Kaku reassures us that you can recall a car, for example, but not a life form. In other words, he says it's not going to be used to replicate the human biokind, although he admits to that this kind of research can have "unintended consequences". Kaku is still on the fence regarding this research, he says. I would say, no he's not. He is working for the Machine Kingdom and is their spokesperson in popular media. He has the charisma necessary to seduce the masses and this is what he is being used for. By "being on the fence" he can attract those who are "being on the fence" and eventually win them over.

To put this in a metaphysical perspective, the Pleiadians^[14], in a lecture from 2010 tell us that there are time-jumpers; people from our future who are returning to our time to steal human female eggs and interfere with our evolution because they themselves have become totally synthetic life form, like metallic skeletons we see in sci fi movies. They come to try and reestablished their DNA to become biological entities again. These entities, on one of our future timelines, took the microchip, the brilliance of electronics, and abdicated their own biology^[15].

Anyone can make any decision they want, but what I like to stress is that we are at a crossroads right now where we have to decide which way to go, and whatever choice we make, we have to live with the consequences. Before we make any decision, it's therefore very wise to consider all the factors involved.

The Pleiadians also bring up "Cynthia" in a few of their lectures, and although this story got kind of "buried" by the Media after a while, the Pleiadians see it as a tipping point in the human history.^[16] It's the catalyst forcing us to make a choice. Very soon, more sophisticated information will be released. Of course, it's already researched and ready to go; all that is needed is to seduce humanity into accepting it. Michio Kaku and cohorts, we will see more and more of your kind in the very near future, spamming our news channels and in series like those on the Discovery Channel.

8. Smurf's Village

If we as grown ups start thinking about this, it's quite astonishing. While the parents are doing something else, the kids are playing on Smurf's Village on iTunes. This game is about getting the most "smurfberries"--that's how you become the most powerful person in this game. But don't think it's free. Here is the price list:

1. BUCKET OF SMURF...\$4.99
2. BUSHEL OF SMURFB...\$9.99
3. BARREL OF SMURFB...\$24.99
4. BUCKET OF SMURF...\$4.99
5. WAGON OF SMURFB...\$99.99
6. BUSHEL OF SMURFB...\$11.99
7. WHEELBARROW OF ...\$49.99
8. WHEELBARROW OF ...\$59.99
9. BARREL OF SMURFB...\$29.99^[17]

There was an article at MacLife and other places, where this horrendous game was exposed. An 8 year old child charged their parents credit card for \$1,400 to buy delicious smurfberries^[18] in a game that is designed for 4 year olds (who normally can't read). But this is no exception. Children, as early as at the age of 5, have racked their parents' credit cards.^[19]

Let's stop here for a while and reflect. First of all, think back when you were 5 years old. Most people couldn't read at that age, much less have the grasp of how to use a credit card. We didn't even know what it was and how money worked, other than we perhaps got a small allowance to buy a magazine or some candy. These kids, however, are very "profound" and know how to do these things. It's not a coincidence, it's per design. Babies are born into this era to play out theirs and our collective karma; much of it going back to the Atlantean Era, where technology eventually, to a large degree caused its destruction. These babies, when they grow up to be little kids, know instinctively how to use technology. We, as parents, can only watch in awe. What takes us a long time to grasp, they get the hang of in a few seconds. If you as an adult need help to fix your electronic device, don't go to the

manufacturer, go to your kids; they can fix it in no-time! These little kids will be the front people in the new Machine Kingdom.

As a side note, let's go back to "Smurf Village". What do you get for \$1,400? A lot of smurfberries. What are they? Expensive, wonderfully tasting berries? No, they are **nothing**; just imaginary berries in an electronic game. But to the kids, these berries are real. This is what machine technology does. People start living in a totally new matrix, which is electronic in nature. They disappear into a computer screen and start living the holographic life inside of it and forget the life outside. Many parents may recall the times when they had to drag the kids from the computer games, the ipods, cell phones etc. And when they return to your reality, they are not very responsive. They want to go back to "the other world", which is more appealing to them. Can anyone see where this is intentionally leading to? And how can someone get away with selling illusionary smurfberries for a shocking price to 4 year old and up without going to jail? The scary part is that the consciousness of the kids transfer into the computer screen, and this virtual reality becomes conscious. This is not science fiction, as you can see; *it happens now*.

Wars are raging on the planet as usual; that's nothing new. But there is another, more covert Electronic War going on behind our backs, that in the extension is much more devastating.

9. WikiLeaks and a Flashback to the Atlantic Technology Era

Fairly recently from the time I write this paper, WikiLeaks leaked a lot of supposedly classified information, some 90,000 pages, among other things, of what was going on in Pakistan and so forth. Everybody was all wound up about this and wanted to know what was in these papers. But after a while we noticed that it wasn't that hot and exciting, really. It wasn't so much about what was released but what these 90,000 papers represented, of what *could* be leaked. What is there if you push buttons and know how to do it. Because today, everything is stored along "electronic highways".

Things have changed rapidly since the computers were introduced in society and the Internet became accessible to almost everybody on the planet. Of course, much of this is alien technology, received during TTPs (Technology Transfer Programs), but there is more to all this; it's an old dramatization--an old civilization once again coming to life.

Back in the Atlantean era (if we talk about the Atlantean era as the time just before the Deluge--there were more than one Atlantis and they were not all in this dimension or on this planet), the Anunnaki had a similar technology, with electronic highways. They had their records, their blueprints, their patterns to build civilizations, to map the heavens, to understand agriculture, metallurgy etc. They stored this information on something they called *meš* (pronounced, mesh, like in *she*). And they fought over them, punishing each other with death penalty sometimes, if they stole another's master *meš*. If you recall, I wrote about this in the "Anunnaki Papers", when Anzu stole the *meš* to the super-computer system from the Enlil, and eventually was punished with a death sentence. The Anunnaki stored their

history and everything on meš; it was all recorded. The problems they had was that just like us, they had secret information stored there, which those who were not initiated wanted to take part of, so there was a constant struggle to keep this information safe.

Figure 5: Francis Bacon's book, "New Atlantis" (click on image to enlarge)

In this respect, nothing has changed. We are still playing the same games as the gods of old. It may not be so strange when we realize that some of them are still here. However, if we continue playing the games they set up for us, we will not only bring about a New Atlantis, with all its negative sides, leading to another disaster, but this time it will be ten times worse.

Long before the American Revolution, when Freemasonry and the Rosicrucian's took over America, the dream of the New Atlantis had already been planned in secret behind the scenes for hundreds of years (officially), and thousands of years (unofficially). Francis Bacon wrote about the vision of the New Atlantis^[20] and that it would be set up in the future. Manly P. Hall, the Honorary Freemason^[21], who was perhaps the leading expert of Masonry all times, also wrote about the New Atlantis, and that it was finally accomplished by the take-over of the North American continent, which

eventually became the United States of America. Hall was potentially murdered for leaking information that was supposed to be held secret. We owe much to this fantastic scholar.

I said "took over America" in the last paragraph, because that's of course what happened. This was Native American land, which was brutally raped and plundered by so-called civilized men, and whole invaluable spiritual cultures were destroyed to the core, and only remnants of the old wisdom of the Native Indians live on. We got our Atlantis, alright, and Bacon would maybe have been able to finish his book if he were alive. Now, what are we going to do with it? Are we going to let history repeat itself?

10. Technology and Longevity

Longevity is the big issue for humanity; at least for those in power who serve the gods. How can we extend our lifespan and become immortal, just like the gods? Immortal in the sense that we can live perhaps a million years or more?

The writer and researcher, Nigel Kerner, writes:

A body vastly enhanced through biotech and nanotech may suffice to extend life spans indefinitely, but the ultimate leap is to transcend biology entirely. Before 2050, Kurzweil predicts that AI and nanotech will have advanced so far

that his brain, with its memories, capabilities and characteristics, can be reduced to pure information and rebooted in a non-biological format, be it a supercomputer, a real or virtual body, or a swarm of nanobots.^[22]

Being 3rd Density beings, we have separated ourselves from the cosmos, and our longevity has decreased since ancient times. Now we're coming down to a point where we are building our world on itsy-bitsy pieces called nano particles. But what has happened is that all this exploration into the nano is creating tremendous problems in the food supply, in peoples bodies; you have these nano particles, and these nano products. Nano technology was not approached with any care at all, and this is going to create a very devitalized probability in the future for those who will be unable to extricate themselves or to pull their energy away from that probability and move towards a different one; one that is more connected to the cosmos and connected to nature. Science are talking about "junk-DNA", and have no clue that in *that* is the solution. We don't need any kind of technology to activate our dormant DNA, and we will go into this in depth in a future paper. The less technology oriented we become, the more the DNA can reconnect with the cosmos, so instead of adding technology to improve our lives, we should diminish it. And we don't need nano-technology to extend our lives; it is done in a natural way, something for scientists to think about. Dr. Bordon, in his essay, "*The LINK*", he reveals that the Nibiruans are extending their lives significantly, and are becoming in ONENESS as a species, probably because of nano tech; and they are inhaling gold to extend their lives as well. Now they want to introduce these technologies here on Earth, so at least the Elite and those who can pay for it get a longer life than the poor guy with minimal wage, who is standing on his feet all day at McDonalds under tremendous stress.

And who are the Ruling Elite, the Powers That Be, really? Think about it. They are 13 main ruling families of tremendous fortune, and they interbreed with each other. Why do they want to keep their bloodline so intact? The answer, of course, is easy. These families, who are set here to rule while the Ša.A.M.i. Nibiruans are gone elsewhere, are all Ša.A.M.i./Anunnaki hybrids. At least half (probably more) of their genome is Anunnaki. Then it's easy to see what the Anunnaki traits are; just watch the Global Elite to understand the Anunnaki mindset! (Alex Collier wrote an excellent article as well on this subject, which you can read here: <http://battleofearth.wordpress.com/2010/03/19/alex-collier-on-reptilians-jehovah-terran-control-groups-and-derivative-concepts/>)

Are you one of these people who has a hard time looking at details as you drive, do data entry on the computer at work, when you have a job situation which requires multi-tasking? In situations like these, are you making errors and feel stupid that you never "learn"?

It requires a whole different consciousness to be detail oriented in this high-tech society with fast pace and multi-tasking than it does if you take your horse and ride out on the prairies for five days. The details you pay attention to are very different from these in the high-tech society. Some people have a very easy time adjusting to high-tech and their brains can do all these fast thing simultaneously; not a big deal for them. But people like myself, whose mind is multi-dimensionally oriented, where nature, beauty, slower pace and with my mind set on details far different from these in today's society, have a hard time adjusting, and also a reluctance and resistance to it. I want less of that, not more. Would you agree?

3-D reality has come to a dead end. Like the Pleiadians say, it has nowhere to pull its juice from (**Pleiadian Lecture [8/13/2011-8/14/2011]: "Awakening to the Sun", CD 3, Track #5**). People are mixed up and can't find their meaning in life; they don't know how to heal themselves anymore.

It's true that our biology was tampered with and our lifespan reduced significantly as they went on with their experiments. They didn't want us to live too long either, because we multiplied uncontrollably. The Bible talks about how humans (hybrids, actually), lived for 900 years or more; sometimes thousands of years, such as the patriarchs, who had to live a long time to be able to complete their tasks, but some Anunnaki were not pleased with the increase of the human population. We became cumbersome to handle and they let most of us be wiped out by the Flood.

It's been known for a long time (and I've been writing about it and posted relevant articles on <http://illuminati-news.com>) that the Power Elite want to reduce the population; some say to a manageable 500 millions. How do they do that? By war, famine and disease? Weather control and vaccination? Yes, that's part of it, but it won't do the trick. The Elite are basically waiting for prophecy to take effect. That will reduce the population drastically.

For the survivors (and there will not be many if they get their ways), the new technology is now introduced and the future visualized. What the Power Elite and their Masters apparently seem to want is a population big enough to control, united with technology and made into half machines, half human, or perhaps 100% synthetic, with no means to mass produce.

What Nigel Kerner is talking about in his article (above) is how the use of nano-technology and biotech will "complete the cycle" and humanity will merge into Oneness. Again, where have we heard that before? Remember Dr. A.R. Bordon's "The Link"? On page 55, he says that in one of the Link Plenum Meetings with off-world beings, he heard a spokesman for the Nibiruans saying that their species have almost completed their cycle into oneness, probability with the help from nano-tech. I am quoting Dr. Bordon:

Ša.A.Mi.s too have been undergoing the changeover from disconnected bodyminds to a common, or a biomind of the whole biokind. It is reported by members who have attended the conferences that they are near the completion of their cycle to oneness, wherein all knowledge and mind resources are used in service to the common. This, it was said, can only be possible when the diversity of biominds of each member remains an individuality while simultaneously being interconnected to the Ša.A.Mi. all-one by low-powered, low-energetic means that utilizes the planet's life belt energetics – something akin to what Earth enjoys in the form of Schumann resonance. There is yet much we don't quite understand about their system of oneness, as there are technologies used to enhance the common biomind that are beyond our level of technology at this time. However, we do now possess a theoretical understanding of how it all works.^[23]

To me, as I've said before, it's not a desirable way to evolve as a species. I am not subscribing to neither nanotech, nor biotech, or any other tech I am aware of to

evolve our species. They are manipulating us into becoming a hive society, where all minds work as one, controlled by an alien race.

Longevity is one thing, technology another. I agree with that living 70-90 years is too short, and we should be able to live much longer than that. Yes, that can be accomplished with technology, and perhaps to some degree by inhaling monatomic gold, like the gods do, but there are indications that gold can be highly addictive, just like cocaine and narcotic substances. The way to achieve a longer life is to develop our sleeping DNA so we will become multi-dimensional again, and also live considerably longer. But how long? If we think about it, it really doesn't matter that much. Who wants to live for a million years in the same body? With a lifespan like that, things can go terribly wrong. If you have direct access to your memories from what happened a million years ago, on your own timeline, where you created certain events, you are too involved and affected by whatever situations you have gotten caught up in, and often intensify them as you move further in local time. This may even be one of the problems with the Ša.A.M.i. We don't want to be another Anunnaki species, where petty wars and childish vanity are big parts of their lives because the gods are bored. I believe we need to end a lifetime after a certain amount of years, considerably shorter than that of the gods, whom achieved extended life through technology. We need to have time to reflect and sort things out between incarnations, in my opinion, and make new goals in a new unit of time. As we move higher up in frequency, this issue will probably resolve automatically.

Figure 6: Visualization of the Machine Kingdom

What about if the gods are not able to evolve the same way we are? Perhaps they were not created to be able to do that because *their* creator gods created them for *their* purpose, which was not to have them evolve and ascend like us? So they use machine technology to reach what we can do naturally. They want our basic biology, but can't merge it with their own, because their biological structure is different. They can only evolve up to a certain point. Knowing that there is no way they can reach our potentials, they do what they can with their own genome, but on the other hand, they are created for power and control, so therefore they can't accept that we evolve differently from them. Besides, they feed from the fear they are creating in us and we are their food source. They don't want us to evolve, because when we're out of their frequency fence we are out of reach for them. They manipulated our DNA so that we wouldn't evolve and ascend easily, but our 12 strand DNA was already in our bodies, and they, to their own misfortune, only have 11 strands.^[24]

This, I believe, is that we have to face; we have a lot of Anunnaki DNA inside of us, but we also have DNA from the earlier, more spiritually uplifted gods, with our junk DNA still inactivated to its full potential. Do we want to become like the Anunnaki, and achieve longevity by taking shortcuts through nano- and biotech, or do we want to use free flowing, fluid energy to reach higher forms of existence? In addition, knowing how it usually works, artificial longevity through bio- and nanotech may be something only available for the Elite (they are already getting older than the average man, if you've noticed, e.g. Bush Sr., David Rockefeller, Henry Kissinger), and the virtual Machine World, the cyborg existence, may be for the masses. Whatever it may be, it gives me the shivers.

The question is: what future do we dream? With this I mean *both* in an awake state and in dream state. We have prophecies, but not everything is predestined; by deciding our future and dreaming it up, we create it. Like-minded will create a like-minded future.

Another big concern from my point of view is how the technology achieved by TTPs# can be used for warfare. What would stop the people who have access to this technology to create super-soldiers? This concern is very real; look at the drones they are using already. It's stone age in comparison, but we can see in what direction things are going.

It's therefore, in my subjective opinion, with all the above mentioned, discouraging to see respected researchers and writers like Neil Freer, who have done a great job with exposing alien visitors who have been worshipped as Gods in our past (and still are), and awoken people from the "godspell" we've been under, to promote artificial intelligence like he does on his website^[25]. I encourage people to read it to make up their own minds, but I personally think he's on a dangerous path, and I hope people who have now woken up from the godspell also will wake up from the Artificial Intelligence spell.

Dr. Bordon and LPG-C have worked on longevity for about a decade, and Bordon replied to a comment on one of my blog entries about Ray Kurzweil with the following statement:

We are already becoming immortal – small steps at a time. We started a program ten years ago designed to achieve longevity and the knowhow to access, affect, and when necessary change the information bandwidth of our RNA-DNA. You can read about this quiet revolution in *The Coming Longevity of the Earth Human Biomind* (Lulu Press, lulu.com)."

Immortal is one of those words poorly used. Often it's used to mean long living instead of never dying. Theoretically, a biological entity can be immortal provided certain things are part of the genetic make up of the body of that person. But for us today, we function on chromosomes that contain some 31,000 genes (plus some 3,000 genes in our mitochondria) and we biologically exist on 20 base aminoacids. That's us today. Question is, what can each of us do (instead of relying on what Kurzweil and the singularitarians propose: let's use technology to enhance and prolong our lives, such that the people will say we can be immortal. Good press, but that's about it.) If we use a generation (25 years) as a measure and begin teaching our kids what we started teaching the members of the experimental groups in our study, starting some ten years ago, how do we tell if their lives are being prolonged? Well, you can't well tell by using linear time. You have to go to other ways. One is the bioelectricity of the body, which is a good measure of the bioelectric age of a person (which is not the same as the time-linear age in years) (or revolutions around the sun). This measure can be given a larger frame of view: longevity, or the amount of energy we have and keep at various points as bioelectric age by comparison to one's linear age. So you have a 60 year old woman who has the body of a 42 year old female, or a male who is 71 but has the body of a 54 year old male. The knowhow I mentioned before is the how to get to change your bioelectric age by using a

number of ways to intervene on our body/minds to get them to restore or even gain electrostatic energy in our cells, exercise routines that (combined with nutritional regimes fitted to the physical needs of a person) can result in body mass retention of the good kind (more protein, less body fat, keeping the numbers in the “good” range (triglycs, ldl, ldh). All of this is possible. It takes a conscious decision and information.

All of the people participating are not rich, quite the contrary, they are middle class and also people working at McDonald’s paycheck to paycheck. The thing that changed is their lifemind (mind time applied to keeping the body optimal), how they handle stress, how they consume health information that translates into what they need to do for themselves, to keep in track of what each of them want to do for their body/mind, their families, etc.

My argument with Ray is that relying on technology assist to reach instant longevity doesn’t necessary give us the time to change the mimes (belief systems) by which we live. That requires at least three generations (or 75 years). However, it is also possible to accelerate the bioelectric transformation of a generation and see in ten years some results that encourages the soul. On the average, 6.5 retroyears in ten years of participation. Let me translate this: this means experimental group participants are gaining an average of 6.5 years in bioelectric terms, so if a man was fifty when he joined and his wife was 47, subtract 6.5 from their linear ages and that will tell you the bioelectric age of the person.

This, in my opinion, is a much better way to achieve a longer lifespan; that in conjunction with activating the dormant DNA, which will automatically make us live longer.

11. A Multi-Dimensional Perspective on Nano Technology

Time, as we know it, is a local custom; something we have talked about earlier. In reality, on a multi-dimensional level, all time happens simultaneously, and so do our incarnations. We send out a number of soul fragments who incarnate simultaneously in different places in different times per local custom.

What happens now and will happen in the near future, if we are still speaking of technology, is nothing spontaneous. In certain terms, certain beings set up things already millions, sometimes billions of years ago to play out at a later time. Therefore, on a Multi-D level, the violence and technology spurts were planned to happen at certain local times (an easy task for beings who can look at things from another perspective than we presently can, trapped in the local time system). So we have the Atlantean time with all its technology and violence, we have the Incas and the Aztecs, and the violence connected with them, we remember Hitler and Nazism, and last, but certainly not the least, we have the U.S. government playing Gods, dramatizing the Atlantean period, which is now being relived again to give us a chance to clear a ten thousands of years old collective karma.

Each civilizations, whether they happen now or happened in the past go through their peak time of violence and aggressiveness; although it is all happening at once

from a Multi-D perspective. Just as every culture's genesis and flourishing is happening at once as well.

The Pleiadians asked an interesting question in one of their lectures, related to the above: "*Which one of the civilizations will meet at the 'supernova point'?*"^[26] (The supernova point being the point in 2012, when the wave of enlightenment will hit us; I'm sure being the same wave LPG-C are talking about, which I discussed in an earlier paper). The answer is: all of them will, because time is simultaneous. And timelines will merge by 2012 and are already in the process of doing so.

Technology and certain key events that were (and are) meant to happen are hidden on certain frequencies. Just like we hide what we don't want others to find in locked cabinet, bank vaults etc., multidimensional beings in the past (in our term) hid what was not meant to be found right away on different frequency levels, and when certain people (or a percentage of the population) reached that frequency, what was hidden was suddenly found. This is another perspective of "alien technology". Great inventors, like Nikola Tesla, ingenious scientists like Albert Einstein, thinkers like Pythagoras etc., have been said to have had alien invention with their discoveries. This is certainly true, but on much more levels than most can imagine.

Many metaphysical sources mention the Anunnaki having encoded our DNA as well, so that at a certain time, certain codes are activated so that we start inventing new technology or whatever they want us to achieve at a specific level of our development.

This is what could be called predestiny, if you will, but remember that predestiny only works when consciousness is sleeping. If we wake up to the fact that we have been programmed, and that we live in a free will universe (something the gods have tried to neglect in our case, trying to make us predictable in certain terms), we will see it's easy to step off the road we're traveling on, watch the "lorries roll by", tighten our backpack and walk in the opposite direction, away from the road, and out in the unexplored wilderness. After a while, the sound of the lorries and cars rolling by fade out and disappears. No one can force us to go in any direction than the one we choose. Not when we have decided and put our energies towards it. It may sound too fantastic, but it's really basic, and it is working. Make a wish-list if you want to; put down what you really want for yourself and ask those around you to do the same. Then make this wish-list come true, item by item, by manifesting the thoughts in this reality. Once you do this; without using any effort, just light thoughts; your reality will change. Put your thoughts, emotions, intentions and your certainty behind the fact that this is how your life is going to be from now on, and nothing less than that. However, be realistic and don't make wishes that are too "way out there". I think you get the picture. Be clear and feel gratitude for what you have, and when you make wishes for your present and your future, do so without creating counter-intentions telling you *why* this or that is too hard to accomplish, e.g. "what will my parents say?", "what will happen with my friendship with John?" etc. These objections, or counter-intentions are *exactly* what keep people from achieving their goals. Your goals are *your* goals, and you have the perfect right to achieve them; actually, it is your responsibility to do so, because that's what you're here for. We can choose not to, and no "God" or "Devil" will punish you, but you will waste our time.

Every day we wake up it's an excellent idea to set the direction for the day. Say to yourself, "this day is going to be a great day where everything is working out to my favor; better than I can imagine". This really sets the tone. Just think the thought, manifest it and let it go. After a while, by doing this every morning, you will see how your life changes to the better.

So why am I bringing all this up while talking about machine technology? Because, like with everything, technology can either enhance life or be used to control and enslave. What we have gone over in this paper is how certain forces want to use it, and *are* using it. Do we want it? Is it ethical? Moral? If you would choose, is that the future you want to see? Or does the multidimensional future, using the Third Eye and the Heart Chakra in particular, sound like a more exciting journey?

Acronyms (in alphabetical order) (words followed by a pound sign #):

TTP = Technological Transfer Program. Exchange program between human governments and extraterrestrials. They give us technology in exchange for something else--normally access to DNA bases, being allowed access to human DNA banks, allowed to abduct certain amount of people, or for using space for middle-landings on Earth.
